3D Matters is Singapore's first end-to-end additive manufacturer to be awarded the ISO9001:2015 Quality Management Certification

- *Global quality management system standard affirms 3D Matters' processes and standards in the additive manufacturing industry*
- *3D Matters' customers in the region will benefit with the adoption of quality management practices that focus on product quality and customer satisfaction*

Singapore, 18 July 2017 - Leading Singapore-based, end-to-end additive manufacturer 3D Matters Pte Ltd ("3DM") received the ISO 9001:2015 certification from DNV GL, a global accredited third party certification body with a strong focus in the maritime, oil & gas and energy industries, among others.

The first additive manufacturing and 3D Printing company in the region to receive the international quality management system standards certification, the ISO9001:2015 acknowledges 3D Matters' commitment to continual improvement, customer satisfaction and overall sustainable business performance through the implementation of a stringent quality management system. The certification is also recognition of 3D Matters' ability to build stakeholder trust by consistently delivering products and services that meet customer, statutory and regulatory requirements.

CEO of 3D Matters Mr Matthew Waterhouse said, "3D Printing is an emerging technology that is facing rapid advancements, and hence demands a quality management framework that enhances safety, cost efficiency and sustainability even as we continuously innovate to bring value-add to customers. These several months of hard work and team effort to qualify business, product and organizational quality on all fronts, has been the continuation of a rewarding journey for us as we continue to discover ways to become even more productive and efficient while meeting and enhancing quality standards."

With 3D Printing dramatically changing how businesses operate - such as being able to extend the lifespan of equipment, on-demand local printing of spare parts management or even creating new products from recycled material, 3D Matters' implementation of ISO9001 across its entire end-to-end additive manufacturing process, from 3D Printing design and consultancy to actual production and post-production activities, will provide added assurance to its world-class customers and partners. 3D Metalforge, the sister company of 3D Matters that specializes in metal printing, also received the ISO9001:2015 certification at the same time.

About 3D Matters

Founded in Singapore in 2012, 3D Matters is a fast-growing 3D Printing service bureau providing end-to-end additive manufacturing solutions across Southeast Asia. Apart from helping clients with scale-accurate models and fast prototyping, we also enhance their design and manufacturing capabilities to shorten lead times for spares and obsolete parts, as well as speeding up time to market for new products. Key industries we support include maritime/offshore, architecture, building and construction, infocomm and digital, precision engineering and manufacturing as well as advertising and design.
